

## Thommen Medical «We're building for the future!»

On 11/6/2020, the foundation stone of the production and customer center from Thommen Medical was laid by the CEO, Livio Marzo.

«With the construction of a new building in Grenchen, we are pursuing two fundamental objectives. In the cutting-edge training center, along with virtual training sessions, we will be facilitating direct contact with opinion leaders and experts for our customers. Additionally, the expansion of the production center will lead to a further increase in the efficiency of our manufacturing and will keep the quality of our products and services at a high level», said a clearly delighted CEO, Livio Marzo.

Thommen Medical AG has been highly successful in the last two years and was already planning the new building to go alongside the current site in Grenchen before the COVID-19 pandemic hit. With the production and customer center, not only will the disparate segments of the business be integrated, but the most up-to-date training facilities will also be created for customers, partners and employees. The new building with its 2,700 m<sup>2</sup> total floor area will make both automation in production and optimization of processes easier. From an ecological point of view, the new building is a flagship, when you consider the vast photovoltaic system on its roof and the building services technology that has been optimized by an air source heat pump. The building is being constructed by a real estate company which lease premises to Thommen Medical AG. Over the longer term, there are plans to create more than 20 new jobs to consolidate Thommen Medical AG as a strong and committed partner and expert in oral implantology.

The opening of the building is scheduled for the fourth quarter of 2021, which will be right on time for Thommen Medical AG's 20th anniversary.

### **Information on Thommen Medical:**

Thommen Medical is proud that leading dentists choose to work with the Thommen Implant System, as only the best dental implant system is good enough for their patients. The dental implant system from Thommen Medical is easy to use and means that first class clinical results with an excellent esthetic result can be achieved. Also, after more than 33 years of clinical experience and working in close collaboration with international leading dentists, dental technicians and well-respected academic institutions in research and development, Thommen Medical is continuing towards its objective that every patient should have access to the best dental restoration solutions available. Thommen Medical manufactures the products in its own factory in Grenchen, Switzerland, and has subsidiaries in Switzerland, Germany and in the USA. Thommen Medical is represented by distribution partners in other important markets in Europe, Asia and the Middle East.
